Space for what comes next.

A small personal workspace for ideas, plans and the next meaningful step. Designed to be useful from the very first minute.

THE NORTH STAR

Capture a thought. Shape a plan.

Find your next step without losing the bigger picture.

A focused first release

01 **Capture**

Create and edit notes without choosing a category first.

02 **Plan**

Keep a small daily list beside the ideas that inspired it.

03 **Return**

Find recent notes and favourites with a simple search.

A simple path to release.

1. Build the useful core

Create, edit, search and save notes locally. Keep navigation predictable and the reading surface comfortable.

2. Make it feel effortless

Test empty states, keyboard navigation, phone layouts and loading feedback. Save changes as the person writes.

3. Put it in real hands

Ask three people to capture a thought, make a plan and return to it. Observe where explanation is needed.

Ready when

Someone can create a note, turn it into a small plan, leave the app and find it again without instructions.

Keep for later

Shared projects, rich embeds and optional sync. The first release should prove the everyday experience before it grows.
